Canadian Data Report of Fisheries and Aquatic Sciences No. 785

Fisheries and Oceans Pêches et Océans

Canada

Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

B. Irwin, J. Anning, C. Caverhill, A. Macdonald and T. Platt. 1990. Primary production on Georges Bank - August 1988. Can. Data Rep. Fish. Aquat. Sci. No. 785: iv + 197 p.

During the period 15-31 August 1988, primary productivity and other related variables were measured on Georges Bank. In this report, we make available the raw data and some fitted parameters.

RESUME

B. Irwin, J. Anning, C. Caverhill, A. Macdonald and T. Platt. 1990. Primary production on Georges Bank - August 1988. Can. Data Rep. Fish. Aquat. Sci. No. 785: iv + 197 p.

Pendant la période du 15 au 31 août 1988, la production primaire et plusiers autres variables ont été mesurée sur "Georges Bank". Dans ce rapport nous présentons les données brutes ainsi que les paramètres calculés.

INTRODUCTION

This cruise was a continuation of the experiments conducted in 1985 (Irwin et al. 1987). A series of stations were occupied across the tidal front on the North East side of Georges Bank. *In situ* primary productivity experiments were not attempted because of the strong tidal currents.

SAMPLING

All water samples were collected with 12 or 30 *l* Niskin bottles. Sampling depths were 1, 5, 10, 15, 20, 25, 30, 35, 40, 50, 75 and 100 m where water depths permitted. Samples were collected at 0800 and 1500 hours each day the ship was on station.

METHODS

Productivity - P.I. Experiments

Primary productivity was measured using the ^{14}C method essentially as described by Strickland and Parsons (1972). 40 μCi of sodium bicarbonate ^{14}C was added to each of 42 light and 2 dark bottles for each experiment. Bottles were incubated in temperature controlled incubators illuminated by 250 w tungsten halogen lamps. All incubations were of two hours duration. All samples were filtered onto Whatman GF/F filters.

Chlorophyll

Replicate 100 mls of sample were filtered onto 25 mm Whatman GF/F filters. Chlorophyll was extracted for 24 hours with 85% acetone at 0°C in the dark. The fluorometric technique of Yentsch and Menzel (1963) as modified by Holm Hansen et al. (1965) was used to estimate chlorophyll concentration.

Organic Particulates

Samples for particulate organic carbon and organic nitrogen were filtered onto precombusted 25 mm Whatman GF/F filters. Filters were analyzed by combustion in a Perkin Elmer Model 10 CHN analyzer.

Nutrients

Samples for nitrate, silicate and inorganic phosphate were collected from most sampled depths. Samples were analyzed immediately after collection using a Technicon II Autoanalyzer. Nitrate was measured using industrial method 158-71W, silicate with method 186-72W and phosphate with method 155-71W.

Incubation Light

Photosynthetically Active Radiation (P.A.R.) was measured at each bottle position in the incubators with a Biospherical Instruments 4π quantum meter (Model Q.S.L. 100).

Estimation of Photosynthetic Parameters

Measurement of specific production P^B and irradiance I were used to estimate parameters in the equation of Platt et al. (1980),

$$P^B = P_S (1 - e^{-\alpha I/P_S}) e^{-\beta I/P_S}$$

P_s (mg C mg Chl^{-1} h^{-1}) is the light saturated rate of photosynthesis in the absence of photoinhibition, α (mg C (mg Chl)$^{-1}$ h^{-1} w^{-1} m^{-2}) is the initial slope of the PI curve and β (same units as α) is a parameter that characterises photoinhibition. Complete details of the fitting routine are given in Irwin et al. (1982) and a discussion of the mathematical basis for this technique is given in Irwin et al. (1980).

ACKNOWLEDGEMENTS

We wish to thank Mark Hodgson and Heide Kirshner for their assistance during the cruise and in the analysis of samples after the cruise.

LIGHT SATURATION DATA AND RELATED BIOMASS AND NUTRIENT DATA

UNITS

P = mg C (mg chl)$^{-1}$ m^{-3} h^{-1}

I = W m^{-2}

P_S = mg C (mg chl)$^{-1}$ h^{-1}

α = mg C (mg chl)$^{-1}$ h^{-1} w^{-1} m^{-2}

β = mg C (mg chl)$^{-1}$ h^{-1} w^{-1} m^{-2}

Organic particulates are in mg m^{-3}. Inorganic nutrients are in mg at m^{-3}. The 90% confidence interval for P_S, α, β are shown in the closed brackets below the estimates for each parameter.
